CONTENTS

5	1. Introduction
8	1.1 Goal of the Supply/Demand Gap Analysis Report
10	1.2 Structure of the Gap Analysis Report
12	2. Industry Profile of Clarion University's Workforce Region
12	2.1 Major Industry Groups
14	2.2 Largest 4-Digit Industries
14	2.3 Largest Growth 4-Digit Industries
16	2.4 Fastest Growing 4-Digit Industries
17	2.5 Concentration of Industries
20	3. Occupational Profile of Clarion University's Workforce Region
21	3.1 Major Occupation Groups
22	3.2 Skilled Occupations Overview
22	3.3 Largest Occupations
23	3.4 Concentration of Occupations
26	3.5 Occupations Aligning to Associate's Degrees
30	3.6 Occupations Aligning to Bachelor's and Graduate Degrees
34	4. Postsecondary Program Completions in Clarion University's Workforce Region
34	4.1 Associate's Degree Completions
37	4.2 Bachelor's Degree Completions
40	4.3 Graduate Degree Completions
43	5. Overview of Gap Analysis
45	5.1 How to use the Gap Analysis
48	5.2 Excess Demand Gaps for Skilled Occupations
50	5.3 Excess Demand Gaps for Occupations Without a Clarion University Match
52	5.4 Supply Surplus Gaps

54	6. Conclusion
55	7. About the State System’s Gap Analysis Project
56	8. Data Sources Key
57	Appendix A: State System Sub-regions with PREP Regions and WIA Regions
58	Appendix B: O*NET Job Zone Codes
61	Appendix C: Strong, Limited and Weak Education Program to Occupation Connections
62	Appendix D: 4-Digit Industry Employment Projections
71	Appendix E: Methodology
73	Appendix F: Gap Analysis Results
87	Appendix G: Crosswalk of Programs to Occupations

GLOSSARY OF TERMS

The following descriptions provide a point of reference to understand terminology as well as the types of data and analysis undertaken in this study, reflecting historic and contemporary narratives.

Fastest Growing: A term used to describe the relative growth (percent change) of an industry or occupation in a given time period. Fastest growing industries and occupations in this study are identified by the highest relative change in jobs between 2014 and 2024.

High Demand: A term used to describe the demand for workers in a given occupation. High demand occupations are identified as having the highest number of new and replacement jobs projected between 2014 and 2024.

Industry Change: A measure of the change in employment within an industry, used to identify whether an industry is growing or declining, as well as the rate of change. Projected changes lay out expectations of growth/decline for specific industries.

Job Postings: The number of unique (de-duplicated) online postings for a job in a given occupation.

Location Quotient: A comparative statistic used to calculate the relative employment concentration of a given industry or occupation against the average employment of the industry in a larger geography (for example, countrywide). Industries with a higher location quotient (usually greater than 1.2) indicate that the region has a comparative advantage or specialization in the production of that good or service or has a high degree of specialization within its workforce.

New and Replacement Jobs: A demand-side estimate of the number of job openings in an occupation that result from new job growth as well as replacement demand. Replacement demand comprises occupation job leavers based on separations, retirement, and death.

Occupation Jobs: A measure of employment within an occupation category, used to identify which occupations have been growing or declining, as well as the rate of change. Projected changes lay out expectations of growth/decline for specific occupation categories.

Sub-regions: Geographic areas within Pennsylvania defined for more focused workforce and education gap analyses. Sub-regions were determined primarily on Partnerships for Regional Economic Performance (PREP) boundaries. PREP is Pennsylvania's network of business assistance partners, designed to help companies start, grow, and prosper. Please refer to Appendix A for mapping of the Sub-regions and PREP boundaries.

ACRONYMS USED

ACS: American Community Survey

BLS: Bureau of Labor Statistics

CIP: Classification of Instructional Programs

DOE: United States Department of Education

DOL: United States Department of Labor

EMSI: Economic Modeling Specialists International

CEW: Center on Education and the Workforce (Georgetown University)

IPEDS: Integrated Postsecondary Education Data System

LAUS: Local Area Unemployment Statistics

LEHD: Longitudinal Employment and Housing Dynamics

NAICS: North American Industry Classification System

NCES: National Center for Education Statistics

OES: Occupational Employment Statistics

O*NET: Occupational Network

PUMS: Public Use Microdata Sample

QCEW: Quarterly Census of Employment and Wages

SOC: Standard Occupational Classification

1. INTRODUCTION

Pennsylvania’s State System of Higher Education (State System) comprises 14 universities, four branch campuses, multiple regional centers and the McKeever Environmental Learning Center.¹ The universities are located in rural, suburban, and small-town settings around Pennsylvania. The State System’s two educational hubs (with locations in Harrisburg—the Dixon University Center, and Philadelphia—State System @ Center City) offer academic programs through a consortium of public and private colleges and universities.

Per Act 188 of 1982, the State System’s mission “is the provision of instruction for undergraduate and graduate students to and beyond the master’s degree in the liberal arts and sciences, and in the applied fields, including the teaching profession.” In doing so, the State System’s purpose is “to provide high quality education at the lowest possible cost to students.”² Analysis and understanding of the economy and workforce the State System supports, as well as the alignment between education programs and talent needs, further advances the State System’s mission and philosophy. This is the goal of the State System’s Supply/Demand Gap Analysis Project. It enables effective and targeted strategies and decision-making, grounded in data-driven evidence. Through two earlier reports—‘Pennsylvania’s Workforce Characteristics Report’³ and ‘Degrees of Value: College Majors and the Pennsylvania State System’s Contribution to the Workforce’⁴—foundation was laid for the State System’s Supply/Demand Gap Analysis Project. This supply/demand gap analysis report establishes the framework to ‘crosswalk’ education programs with relevant occupations. This crosswalk establishes the relationship between the workforce

1 One of the State System’s entities, System-wide Functions and Services, is primarily located at the Dixon University Center in Harrisburg and includes: System-wide shared administrative services; System leadership functions of the Chancellor and Board of Governors; some System-wide initiatives and grants managed on behalf of the universities; and the academic, student, and facilities support for the multi-university sites in Harrisburg and Philadelphia.

2 The State System’s Economic and Employment Impact on the Commonwealth of Pennsylvania—released April 15, 2015.

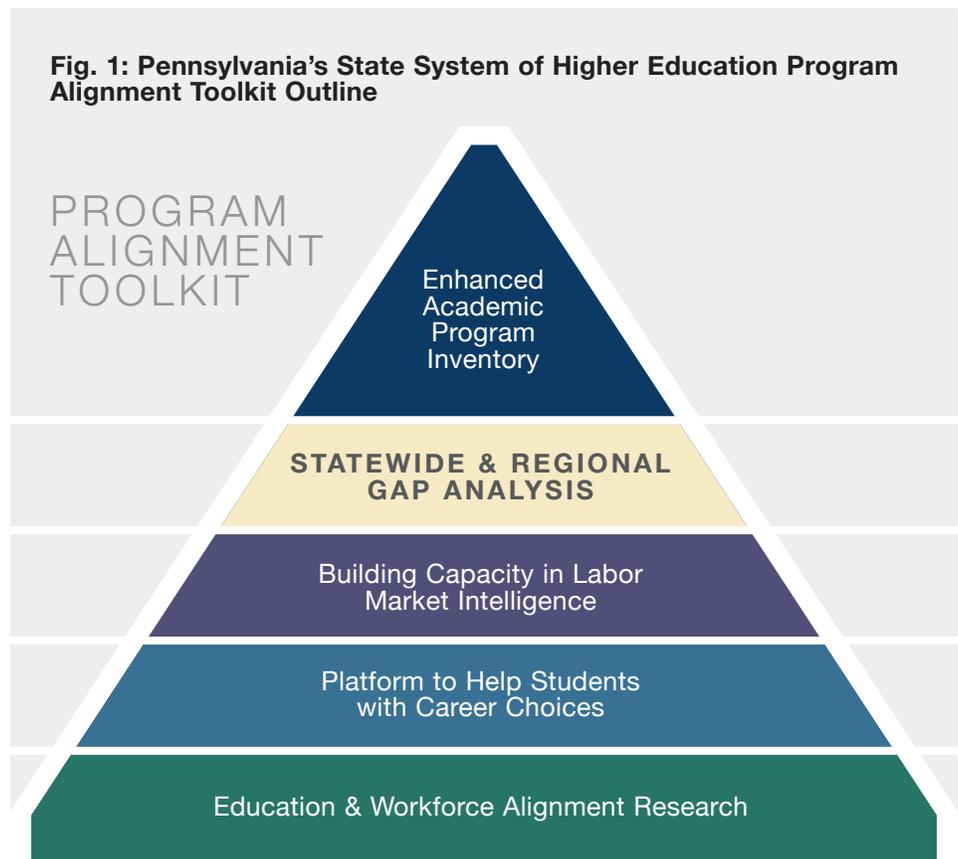

3 Pennsylvania’s Workforce Characteristics Report—a collaboration between the Pennsylvania State System of Higher Education and Oxford Economics with input from Georgetown University’s Center on Education and the Workforce, provides detailed demand-side projections for occupations within Pennsylvania, as well as other labor market intelligence for skilled occupations.

4 *Degrees of Value: College Majors and the Pennsylvania State System’s Contribution to the Workforce* is an education and workforce analysis of the Commonwealth with a particular emphasis on the State System’s Universities’ output produced by Georgetown University’s Center on Education and the Workforce.

employed in specific occupations and the degrees that those workers earned. The goal of this report is to understand this relationship in the context of Pennsylvania’s projected skilled workforce needs and education output.

This study and the broader set of deliverables under the State System’s Supply/Demand Gap Analysis Project will assist universities and education planners by providing an infrastructure of resources for internal planning, as well as external engagement. Understanding key gaps and surpluses within Pennsylvania helps to better align policy and strategic direction in order to continue supporting the talent needs of the Commonwealth.

The results of the State System’s Supply/Demand Gap Analysis project will become part the State System’s Program Alignment Toolkit (see Fig. 1 below)—an infrastructure of resources that are being created to assist the State System’s universities to increase their individual and collective impact on Pennsylvania’s economy. The Program Alignment Toolkit complements the existing Business Intelligence Environment the State System has created to support data driven decision-making. This environment includes forward-thinking, data-rich projects such as the Financial Risk Dashboard, the Data Warehouse project, and the upcoming Student Success Dashboard.

ABOUT PENNSYLVANIA STATE SYSTEM OF HIGHER EDUCATION

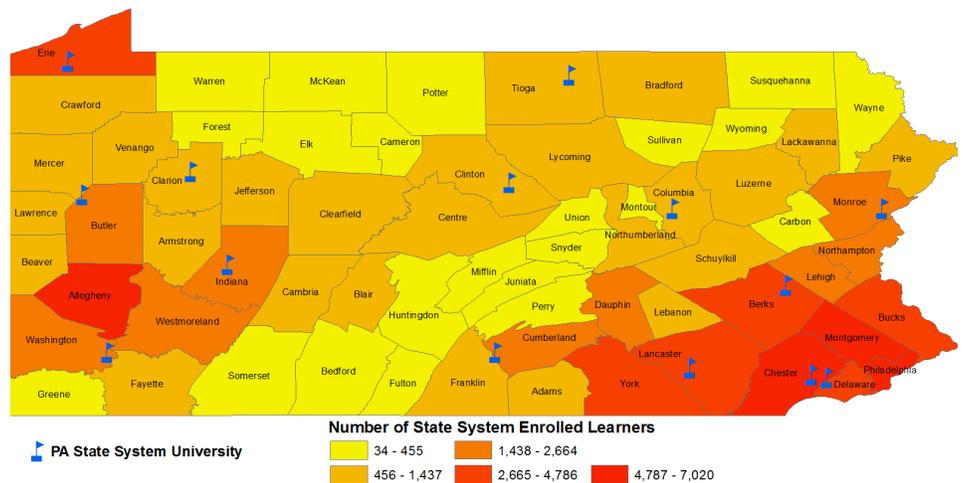

Pennsylvania's State System of Higher Education was established by statute on July 1, 1983, although the 14 universities that comprise the State System have a much longer history dating back to the 19th century.

Today, the State System serves over 110,000 students, with learners coming from every county in Pennsylvania, making it among the largest providers of higher education in Pennsylvania and the United States. It also employs more than 12,000 faculty and staff, making it one of the largest employers in the Commonwealth. Nearly 88% of students enrolled in the State System are from Pennsylvania and the vast majority of students remain after graduation—about 80%.*

The State System generates more than \$6.7 billion in annual economic activity within Pennsylvania. This economic value in turn supports approximately 62,000 jobs through the State System's direct employment, operational expenditures with vendors and suppliers across Pennsylvania, and spending of those who are employed as a result of the State System's operations.

1.1 Goal of the Supply/Demand Gap Analysis Report

This Supply/Demand Gap Analysis Report is specific to Clarion University's (Clarion) workforce region. It builds on information provided in an earlier State System report entitled Clarion University's Workforce Characteristics Technical Report. In the Workforce Characteristics Report, Clarion's workforce region was defined to include the following counties: Allegheny, Armstrong, Butler, Clarion, Elk, Forest, Jefferson, and Venango. The report also contains a set of economic, workforce, demographic, and socio-economic information to contextualize the Supply/Demand Gap Analysis.

The Supply/Demand Gap Analysis Report provides a data-driven perspective of employer demand (growing occupations across the region) and postsecondary education supply (degree production by program and level). The report will assist the State System universities with strategic engagement, program development and evaluation, student engagement, and marketing. The Supply/Demand Gap Analysis Report contains research specific to Clarion's workforce region in the following areas:

- Industry sector and occupation job changes and projections for new and replacement job demand to 2024;
- Size of education production by broad degree category;
- Links between occupations and education programs; and
- Analysis of gaps at the occupational level (presenting a structure to review occupations that have excess employer demand as well as those that have surplus).

While the State System's Gap Analysis project is critical to understanding the connections between education programs and occupations, it is important to note a few caveats to this Supply/Demand Gap Analysis Report:

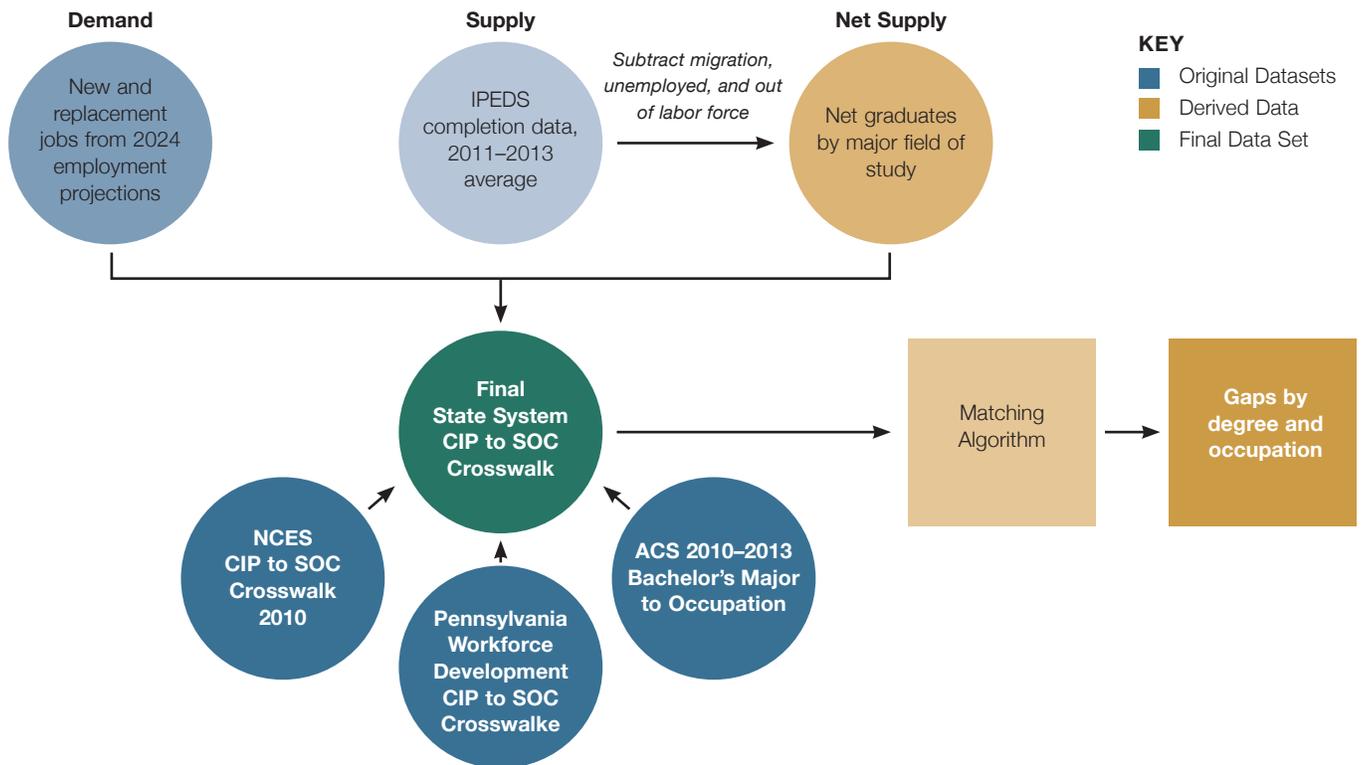

- When considering making adjustments to programs in degree areas related to occupations displaying gaps, further research should be considered to confirm the extent of alignment needed to arrive at equilibrium with the labor market.
- Government data that captures labor market demand lags real-time employer demand as well higher education industry trends. As such, the gap analysis findings may lag these market changes.
- This analysis only focuses on program output as a supply pool (i.e. new graduates). However, regional workforces comprise additional

ABOUT GAP ANALYSIS

A gap analysis comparing educational supply and occupational demand serves as a critical first step in efforts to align education programs with the workforce needs of Pennsylvania employers. A gap analysis provides a data-driven perspective of demand and supply, which can be connected to a larger process of program evaluation and strategic planning, engagement with employers, and student career guidance. The analysis itself is not the solution, but can lend credible insight to guide decision-making at the strategic level.

Fig. 3 provides a high-level flow chart of the process to calculate gaps/surpluses. A methodological description of the supply/demand gap modeling process can be found in Appendix E.

Fig. 3: Overview of the gap analysis methodology for the State System

Source: Oxford Economics

pools of supply—specifically: employed workers, skilled unemployed workers, and skilled underemployed workers. When evaluating gaps, this analysis focuses on new and replacement demand, as opposed to job churn. This helps to mitigate some of the issues involving the employed workforce.

1.2 Structure of the Gap Analysis Report

This Supply/Demand Gap Analysis report for Clarion’s workforce region is organized as follows:

- Section 1** Introduction and background information.
- Section 2** Overview of changes in Clarion’s workforce region industry sectors from a historic and projected point of view, as well as fast growing and most competitive industries.
- Section 3** Overview of changes in Clarion’s workforce region occupations including additional detail on skilled occupations as well as high demand occupations, the fastest growing occupations, and occupations that are highly concentrated in Clarion’s workforce region.
- Section 4** Evaluation of output of education programs at the associate’s, bachelor’s, and graduate level, as well as the State System’s contribution to the total output of bachelor’s degrees.
- Section 5** Comparison of demand for skilled occupations against supply of relevant education program completions.
- Section 6** Conclusion and areas of future research.
- Section 7** Additional information on the Gap Analysis project and contributing organizations.
- Section 8** List of key data sources used in the report.

While the main body of this report provides a high level summary, the Appendices provide an abundance of information for those seeking additional detail.

Appendix A provides a map of the state sub-region boundaries along with economic development and workforce boundaries as defined by PREP and WIA.

Appendix B provides a description of O*NET Job Zone codes.

Appendix C provides further detail about strong, limited and weak connections between education programs and occupations.

Appendix D provides detailed industry employment and projections to 2024.

Appendix E provides a crosswalk and gap analysis methodology.

Appendix F provides gap analysis results for over 500 occupations.

Appendix G provides the crosswalk of programs to occupations.

2. INDUSTRY PROFILE OF CLARION UNIVERSITY'S WORKFORCE REGION

Industry growth is a key driver of demand for occupations and talent. Hence, understanding the structure of Clarion's workforce region industry sectors offers valuable insights into career opportunities that exist. As the State System implements strategies to increase the economic competitiveness of its workforce and ultimately the economic competitiveness of the state, it is important to understand the connection between occupations and industry jobs. The state's workforce changes and labor demand are presented in multiple ways in this section including:

- Major (2-digit) industries;
- Largest 4-digit industries in 2014;
- Largest growth 4-digit industries from 2014 to 2024;
- Fastest growing 4-digit industries from 2014 to 2024; and
- Industries (4-digit) with high location quotient (or concentration) in 2014.

This section explores the current strengths in the economy of Clarion's workforce region by industry and examines trends that may affect industry structure in the coming years. A table of all 4-digit North American Industrial Classification System (NAICS) sector employment and projections for the region can be found in Appendix D.

The following sub-section begins the analysis by examining major industry groups in Clarion's workforce region in 2010 and 2014 as well as projected growth to 2024.

2.1 Major Industry Groups

In 2014 the largest 2-digit industries in Clarion's workforce region include education and health services, trade, transportation and utilities, and manufacturing. As can be seen in Fig. 4, healthcare and social assistance account for the most jobs (about 156,900 jobs), followed by retail trade, education services, and accommodation and food services. Furthermore, each of these industry sectors, except education services, added a significant

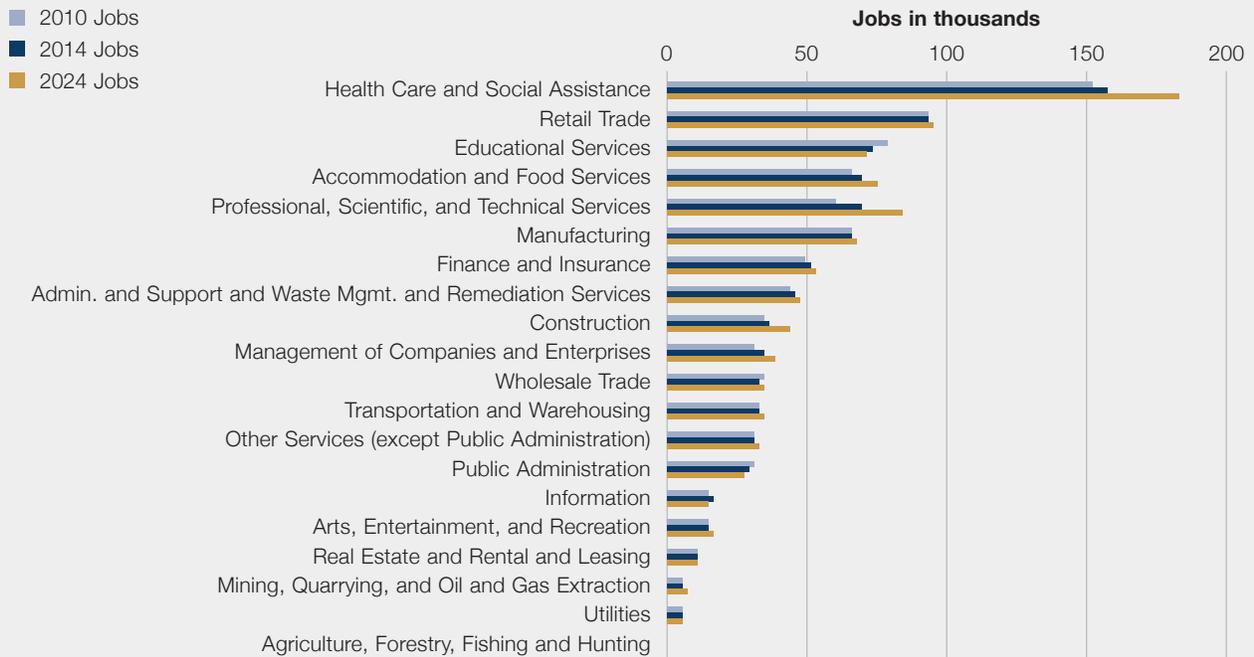

number of new jobs between 2010 and 2014, reflecting both economic recovery from the recession, as well as continued sector growth.

Projections indicate that healthcare and social assistance will add an additional 25,400 new jobs in the region between 2014 and 2024 (16% growth). Professional, scientific, and technical services is projected to add 14,500 new jobs (21% growth)—which will require talent in various disciplines to support this growth.

Substantial economic transformation is taking place across several sectors. While many sectors have experienced moderate or strong growth over the past several years, noted exceptions of job decline include government, education and information. The causes of these reductions may differ. For example, reductions in government employment could reflect changes in legislative priorities and budgets, while reductions in information are largely due to the decline in newspaper and book publishers. This, however, is offset by substantial growth in other sectors discussed earlier.

Fig. 4 below depicts the number of jobs in 2010, 2014 and projections out to 2024 for each of the broad industry sectors.

Fig. 4: Employment by Major Industry, 2010, 2014, and 2024

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

2.2 Largest 4-Digit Industries

The largest 4-digit industries in Clarion’s workforce region are identified by the volume of 2014 employment. Industry sectors that employ the most workers are critical foundations to a regional economy. In Clarion’s workforce region, the ten largest 4-digit industry classifications employed 34% of total jobs in 2014 (298,000 jobs out of 874,900 total jobs in the region). The largest industries include restaurants, elementary and secondary schools, and general medical and surgical hospitals. Fig. 5 below displays the region’s ten largest 4-digit industry sectors in 2014 and projections to 2024.

Fig. 5: Clarion University’s Workforce Region Largest 4-Digit Industries and Projections, 2014-2024

Industry Title	2014 Jobs	2024 Jobs	New Jobs 2014-2024	% Change 2014-2024
Restaurants and Other Eating Places	54,808	58,937	4,129	7.5%
General Medical and Surgical Hospitals	46,966	51,198	4,232	9.0%
Elementary and Secondary Schools	38,081	36,150	-1,931	-5.1%
Management of Companies and Enterprises	34,349	37,836	3,487	10.2%
Colleges, Universities, and Professional Schools	28,277	28,831	554	2.0%
Depository Credit Intermediation	22,317	20,659	-1,658	-7.4%
Offices of Physicians	20,355	22,143	1,788	8.8%
Executive, Legislative, and Other General Government Support	20,046	19,153	-893	-4.5%
Grocery Stores	16,209	14,643	-1,566	-9.7%
Individual and Family Services	16,201	21,698	5,497	33.9%
Total, 10 Largest	297,609	311,248	13,639	4.6%

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

2.3 Largest Growth 4-Digit Industries

The largest sectors are not necessarily generating the most new jobs in Clarion’s workforce region. Projections indicate that the top ten largest growth industries in the region will add almost 35,700 new jobs between 2014 and 2024. Some industries in the top ten largest growth list employ several occupations that require university-level skill specializations. For example,

- **General medical and surgical hospitals** employ a diverse range of health care professionals at multiple levels of educational attainment. This includes professions from surgeons to medical secretaries, as well as a range of nursing professions such as nursing assistants, licensed practical nurses and registered nurses. Projections indicate the industry will add 4,200 new jobs between 2014 and 2024.
- **Computer systems design and related services** employ many skilled occupations such as software developers, computer system analysts, computer programmers and computer user support specialists. Most people employed in these occupations have at least a bachelor's degree. Projections indicate the industry will grow by 6,200 new jobs between 2014 and 2024.

Industry sectors that are projected to add significant numbers of new jobs to Clarion's workforce region over the next ten years will provide opportunities to establish stronger business collaboration and course alignment to these sectors. Furthermore, State System universities currently offer a range of degree programs in computer and health fields that align well to opportunities within these high-growth sectors. Fig. 6 below displays the ten largest growth industries projected to 2024.

Fig. 6: Clarion University's Workforce Region Top 10 Largest Growth Sectors and Projections, 2014-2024

Industry Title	2014 Jobs	2024 Jobs	New Jobs 2014-2024	% Change 2014-2024
Computer Systems Design and Related Services	13,152	19,316	6,164	46.9%
Individual and Family Services	16,201	21,698	5,497	33.9%
General Medical and Surgical Hospitals	46,966	51,198	4,232	9.0%
Restaurants and Other Eating Places	54,808	58,937	4,130	7.5%
Home Health Care Services	7,676	11,287	3,611	47.0%
Management of Companies and Enterprises	34,349	37,836	3,487	10.2%
Other Financial Investment Activities	4,310	6,720	2,410	55.9%
Offices of Other Health Practitioners	7,903	10,084	2,182	27.6%
Scientific Research and Development Services	6,965	9,012	2,047	29.4%
Management, Scientific, and Technical Consulting Services	8,956	10,849	1,893	21.1%
Total, 10 Largest Growth	201,286	236,937	35,653	17.7%

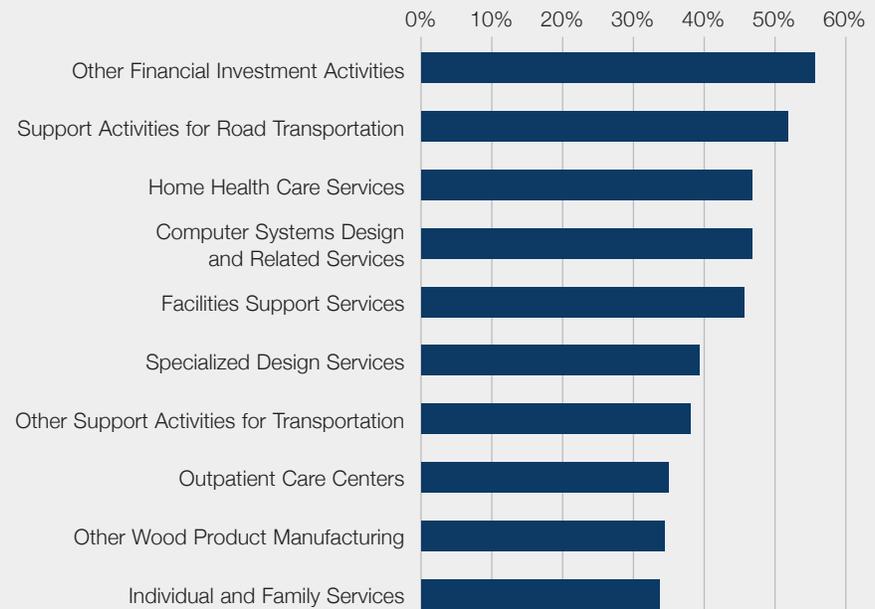

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

2.4 Fastest Growing 4-Digit Industries

The fastest growing 4-digit industries are identified by the highest relative change (percent change) projected to occur between 2014 and 2024. The fastest growing industries represent emerging sectors within Clarion’s workforce region that may present opportunities for collaboration and support from postsecondary education and training institutions. Given the aging population in the U.S. and Pennsylvania, the health care sector is driving demand for workers. The fastest growing industries in Clarion’s workforce region include other financial investment activities, support activities for road transportation, home health care services, computer systems design and related services, facilities support services, and computer systems design and related services.

Fig. 7 depicts the fastest growing industries in Clarion’s workforce region and the projected growth from 2014 to 2024 and Fig. 8 displays the employment in the fastest growing industries, projected job growth, and 10-year new jobs.

Fig. 7: Clarion University’s Workforce Region Fastest Growing 4-Digit Industries and Projections, 2014-2024

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

Fig. 8: Clarion University’s Workforce Region Fastest Growing 4-Digit Industries and Projections, 2014-2024

Industry Title	2014 Jobs	2024 Jobs	New Jobs 2014-2024	% Change 2014-2024
Other Financial Investment Activities	4,310	6,720	2,410	55.9%
Support Activities for Road Transportation	483	734	251	52.0%
Home Health Care Services	7,676	11,287	3,611	47.0%
Computer Systems Design and Related Services	13,152	19,316	6,164	46.9%
Facilities Support Services	740	1,078	338	45.7%
Specialized Design Services	832	1,158	326	39.2%
Other Support Activities for Transportation	191	264	73	38.2%
Outpatient Care Centers	5,363	7,227	1,864	34.8%
Other Wood Product Manufacturing	1,348	1,807	459	34.1%
Individual and Family Services	16,201	21,698	5,497	33.9%
Total, 10 Fastest Growing	50,296	71,289	20,993	41.7%

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

2.5 Concentration of Industries

Certain industries in Clarion’s workforce region have a greater concentration within the region as compared to the nation. A location quotient (LQ) for an industry provides perspective on statewide concentration in industry classifications. When evaluated jointly with the industry employment data, one gains a sense of the industry sectors that might benefit from efforts to align educational opportunities with economic development (i.e. industries that State System universities may consider engaging in larger conversations about aligning employer and educational needs).

Location quotients equal to 1 indicate that the area’s industry concentration is equal to the national concentration of the same industry. Industries with higher location quotients (usually greater than 1.2) indicate that a region has a concentration in the production of that good or service, relative to the rest of the nation. A value of 1.5 indicates that industry employment within the region is 1.5 times more concentrated than the U.S. average. A location quotient below 1 indicates that industry employment within the region is less concentrated compared to the U.S. average. Note: High employment industries do not necessarily result in large location quotients, as this is a relative statistic.

The location quotient chart provides three key pieces of information. The vertical axis indicates the location quotient value. The horizontal axis indicates whether the industry sector is projected to grow or decline over the next 10 years. The size of the bubble indicates the size of employment in the industry.

Industries with high LQ's that are adding new jobs suggest that the comparative regional advantage may be creating further job growth. When viewed together, large employment industries (large bubbles) that have high concentrations (high LQs) and add new jobs (high growth), are significant driving forces for regional growth and advancement.

Industry sectors that are highly concentrated in Clarion's workforce region include: iron and steel mills and ferroalloy manufacturing, railroad stock manufacturing, forging and stamping, and charter bus industry.

Fig. 9 displays the most concentrated industries (as measured by LQ) for Clarion's workforce region at the 4-digit NAICS level in 2014. The figure reflects the comparative advantage Clarion's workforce region enjoys in various manufacturing sectors (both advanced and non-advanced). Warehousing and storage also shows high levels of concentration, highlighting those sectors that support the strong manufacturing base.

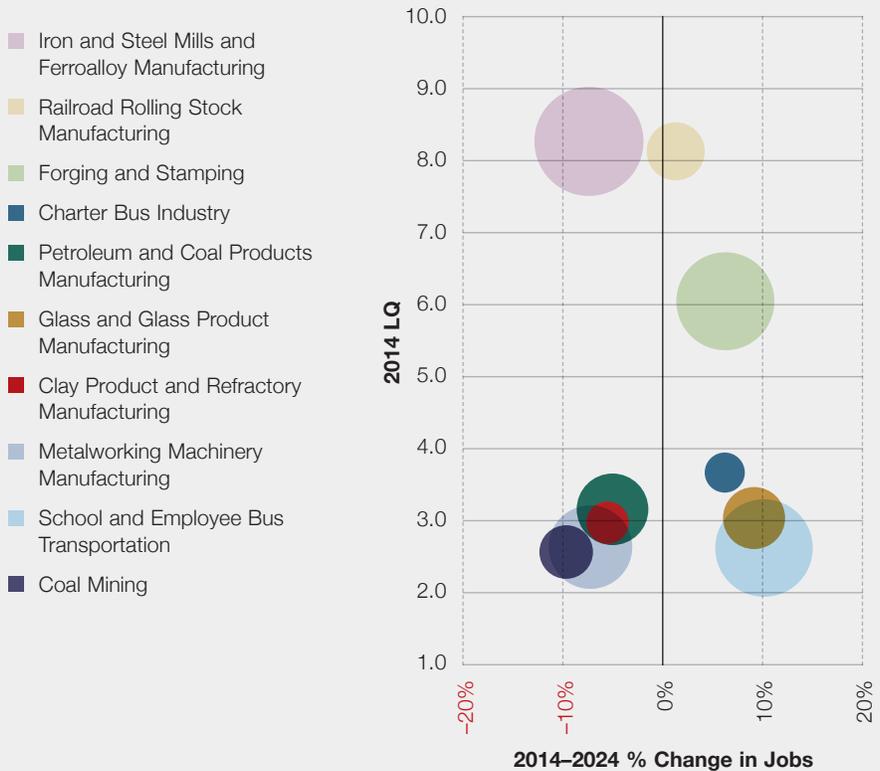

The next section provides information on occupational employment and describes the types of jobs people hold in Clarion's workforce region.

How to read a Location Quotient chart

The location quotient (LQ) bubble chart provides three key sources of information: level of concentration, as indicated by the LQ value, the % change in the variable measured—industries and occupations in this report—and the number of jobs employed. The LQ value is located on the vertical chart. As described above, values above the 1 on the vertical axis indicate higher levels of concentration compared to the national average. Bubbles that are situated above zero on the horizontal axis indicate positive job growth. Finally, larger bubbles indicate that the employment within the measured indicate larger levels of employment.

If one were to divide the bubble chart into sections, bubbles with LQ's greater than 1 located in the upper right hand section indicate highly concentrated industries that are projected to grow, whereas bubbles with LQ's greater than 1 in the left side indicate highly concentrated industries that are projected to decline. Similarly, LQ's less than one but on the right side, indicate job growth, but with a low concentration of employment, relative to the US average. Finally, LQ's less than one and on the left side indicate a low level of employment concentration with projected job loss.

Fig. 9: Clarion University's Workforce Region Most Concentrated 4-Digit Industries and Projected Growth, 2014-2024

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

Fig. 10: Clarion University's Workforce Region Most Concentrated 4-Digit Industries and Projected Growth, 2014-2024

Industry Title	2014 LQ	2014 Jobs	% Change 2014-2024
Iron and Steel Mills and Ferroalloy Manufacturing	8.3	4,841	-7.3%
Railroad Rolling Stock Manufacturing	8.1	1,416	1.2%
Forging and Stamping	6.0	3,872	6.3%
Charter Bus Industry	3.6	698	6.2%
Petroleum and Coal Products Manufacturing	3.1	2,211	-5.1%
Glass and Glass Product Manufacturing	3.0	1,590	9.2%
Clay Product and Refractory Manufacturing	3.0	743	-5.5%
Metalworking Machinery Manufacturing	2.6	3,074	-7.1%
School and Employee Bus Transportation	2.6	4,157	10.1%
Coal Mining	2.6	1,179	-9.6%

Source: BLS (QCEW); Pennsylvania Department of Labor & Industry; Oxford Economics Projections

3. OCCUPATIONAL PROFILE OF CLARION UNIVERSITY'S WORKFORCE REGION

Examining occupational employment data reveals the importance of skills, experience and knowledge of workers. It showcases the types of jobs in which Clarion's workforce region workforce is currently employed and projected to be employed by 2024. When evaluating occupation employment and demand, it is important to note that an occupation can be found in many different industry sectors. For example, every major industry sector employs accountants and auditors to maintain books, payroll, and ensure reporting compliance. This analysis compiles occupational employment across all industry sectors and reports the total number of jobs, median annual wages, and demand (10-year new and replacement jobs) for each occupation classification. The analysis also considers the educational attainment level that is typically required to gain employment in an occupation.

The region's workforce changes and labor demand are presented in multiple ways in this section including:

- Major occupation groups (2-digit SOC);
- Skilled occupations;
- Largest detailed occupations (6-digit SOC) in 2014;
- Occupations (6-digit SOC) with high location quotient (or concentration) in 2014; and
- Occupations aligning to educational attainment at the associate degree level as well as the bachelor's and graduate degree level, specifically:
 - Top high demand occupations (6-digit SOC) from 2014 to 2024, and
 - Fastest growing occupations (6-digit SOC) from 2014 to 2024.

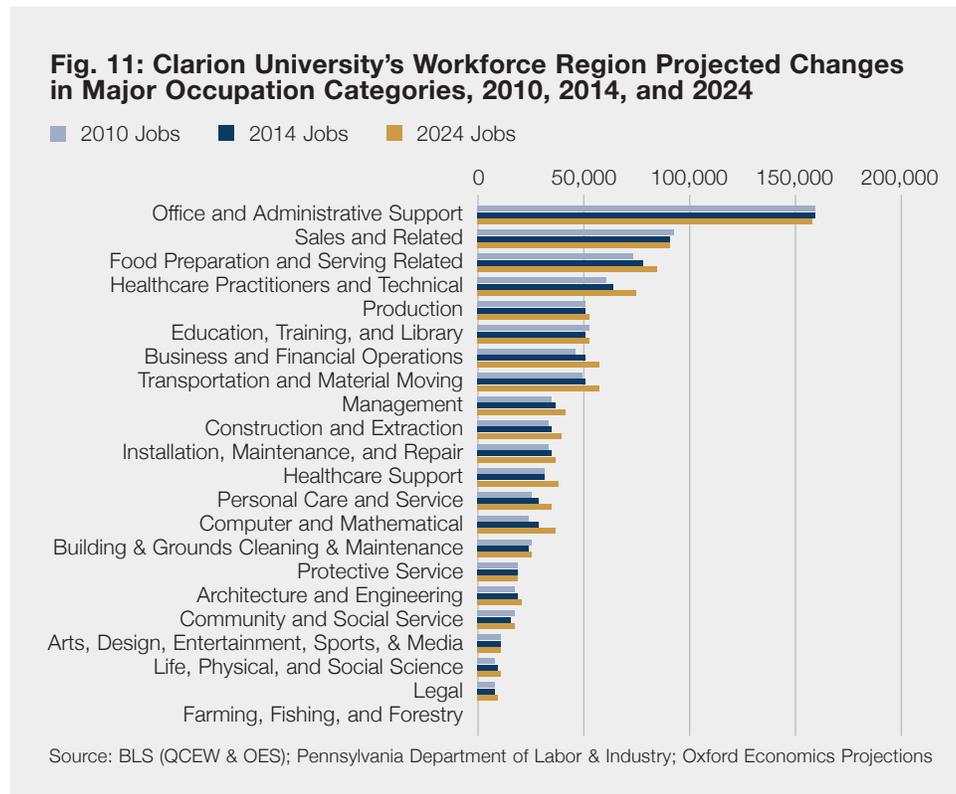

The following sub-section begins the analysis by examining major occupation groups in Clarion's workforce region in 2014 and projected growth to 2024.

3.1 Major Occupation Groups

In Clarion’s workforce region, several occupation categories are projected to grow over the next 10 years, from 2014 to 2024, as well as require a significant level of replacement labor.⁵ Certain major occupation categories—at the 2-digit Standard Occupation Classification (SOC) level—have experienced substantial growth in recent years and are expected to continue to lead the pack to 2024. Between 2010 and 2014 Clarion’s workforce region experienced growth in several occupation categories, which are typically aligned with postsecondary education. These include:

- Healthcare practitioners and technical occupations;
- Business and financial operations occupations; and
- Computer and mathematical occupations.

Furthermore, these three occupation categories are projected to add 24,100 new jobs between 2014 and 2024 and will account for over one third of the total projected occupation job growth in Clarion’s workforce region.

5 This estimate accounts for the need to replace workers who leave an occupation permanently due to retirement, death, or a change in occupation.

Identifying Skilled Occupations

For this analysis a “skilled” occupation is defined as an occupation in O*NET Job Zones* Three, Four or Five. The O*NET program is the nation’s primary source of occupational information. Central to the project is the O*NET database, containing information on hundreds of standardized and occupation-specific descriptors. The database, which is available to the public at no cost, is continually updated by surveying a broad range of workers from each occupation.** Most occupations in Job Zone Three require training in vocational schools, related on-the-job experience, or an associate’s degree. Most occupations in Job Zone Four require a four-year bachelor’s degree, but some do not. Most occupations in Job Zone Five require graduate school. For example, they may require a master’s degree, and some require a Ph.D., M.D., or J.D. (law degree).

For a more detailed description of O*NET Job Zones and training requirements see Appendix B.

3.2 Skilled Occupations Overview

Clarion’s workforce region had 874,900 jobs in 2014, a number which is projected to grow to 940,000 in 2024—an increase of about 65,200 jobs or a 7.4 percent change. It is important to note that the share of Clarion’s workforce region jobs that will require some postsecondary education will increase from 2014 to 2024, showing the employer demand for skilled workers will continue to grow. The growth in jobs that require some level of postsecondary education in 2024 is projected to be 9.8 percent as compared to 4.8 percent for those that do not require postsecondary education. These are defined as skilled jobs or skilled occupations in the State System’s Gap Analysis Project using terminology from the O*NET program.

Fig. 12 shows the number of jobs in Clarion’s workforce region by skilled occupations (Job Zones 3-5) and low skilled occupations (Job Zones 1-2) in 2014 as well as projected growth to 2024 for each set of occupations.

Fig. 12: Clarion University’s Workforce Region Projected Job Growth by Job Zone, 2014-2024

	2014	2024	% Change 2014-2024	Share 2014	Share 2024
Clarion workforce region, Total Jobs	874,882	940,053	7.4%	100%	100%
Job Zones 1-2 (Low Skilled)	418,891	439,148	4.8%	48%	47%
Job Zones 3-5 (Skilled)	455,991	500,905	9.8%	52%	53%

3.3 Largest Occupations

Top occupations in the state are driven by industry composition. Medical centers employ a cadre of health professionals, while enterprise management companies employ a range of business professionals. Given the dominating presence of health care and social assistance, accommodation and food services, retail trade and manufacturing establishments in Clarion’s workforce region, top occupations include: retail salespersons, cashiers, registered nurses, and food preparation and serving workers. Fig. 13 highlights the top occupations in the state, 10-year job growth projections, and new and replacement jobs.⁶ The Job Zone is also included to indicate skill level for each occupation.⁷

6 New and replacement job change takes into account demand for occupations based on: industry growth (new jobs), occupation productivity, workforce ageing (retirements and deaths), migration and other factors that would contribute to new and replacement job openings.
 7 Job Zone One and Two represent low-skilled occupations and Job Zone Three, Four and Five represent skilled occupations.

Fig. 13: Largest Occupations in Clarion University's Workforce Region and Projected Growth, 2014-2024

Occupation Title	Job Zone	2014	2024	% Change 2014-2024	10-year New and Replacement Jobs
Retail Salespersons	2	29,880	31,473	5.3%	12,441
Registered Nurses	3	22,246	26,064	17.2%	8,323

3.4 Concentration of Occupations

Growth in areas of comparative advantage provides career opportunities that reflect statewide workforce concentration. Just as industry location quotient analysis is used to determine industry concentration, occupation location quotient analysis is used to evaluate specializations that exist within Clarion's workforce, which may indicate the presence of key occupation clusters. A classic example of one such cluster would be Silicon Valley's large concentration of IT and computer programming occupations. The presence of occupation concentration (especially skilled occupations) indicates areas of opportunity for postsecondary institutions to support workforce needs for occupations that have strong employment advantages within the region.

Location quotients equal to 1 indicate that the area's occupation concentration is equal to the national concentration of the same occupation. Occupations with higher location quotients (usually greater than 1.2) indicate that a region

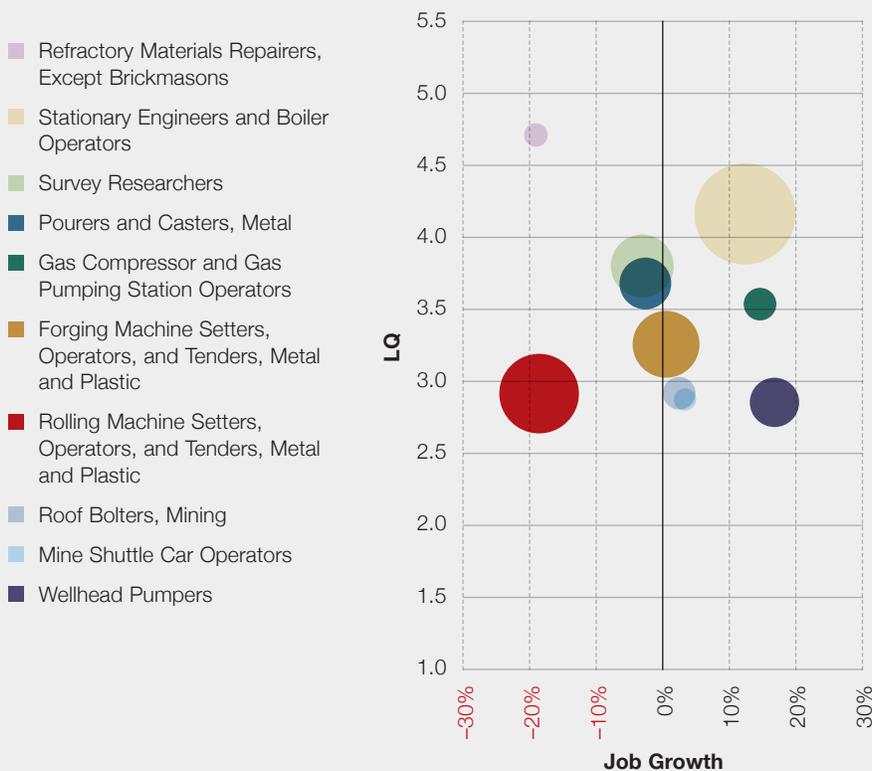

has a concentration or comparative advantage in the occupation, relative to the rest of the nation. A value of 1.5 indicates that occupation employment within the region is 1.5 times more concentrated compared to the U.S. average. A location quotient below 1 indicates that occupation employment within the region is less concentrated compared to the U.S. average. Note: High employment occupations do not necessarily result in large location quotients, as this is a comparative statistic.

The location quotient chart provides three key pieces of information. The vertical axis indicates the location quotient value. A value of 1.5 indicates that employment within the region is 1.5 times more concentrated compared to the average region in the U.S. The horizontal axis indicates whether the occupation is projected to grow or decline over the next 10 years. Occupations with high LQ's that are adding new jobs suggest that the comparative regional advantage may be creating further employment opportunities. The size of the bubble indicates the number of jobs within the occupations. When viewed together skilled occupations with large employment (large bubbles) that have comparative advantages (high LQs) and are adding new jobs (high growth), are likely critical areas of regional workforce needs and warrant closer evaluation of program availability and completion to support statewide workforce demand.

Occupations that are highly concentrated in Clarion's workforce region include: refractory materials repairers, stationary engineers and boiler operators, survey researchers, and pourer and casters, metal.

Fig. 14 illustrates the LQ, projected job change and employment size of the top 10 most concentrated occupations (as measured by LQ) in Clarion's workforce region in 2014. Fig. 15 below provides detailed data on the occupations, including LQ, 2014 jobs, projected 2024 jobs and projected percent change in jobs.

Fig. 14: Clarion University's Workforce Region Most Concentrated Occupations and Projected Growth, 2014-2024

3.5 Occupations Aligning to Associate's Degrees

Clarion's workforce region employment projections to 2024 conducted by the State System's Gap Analysis project indicate significant growth in many occupations that align with postsecondary education. Occupations that generally align to associate's degree programs are categorized as Job Zone Three.

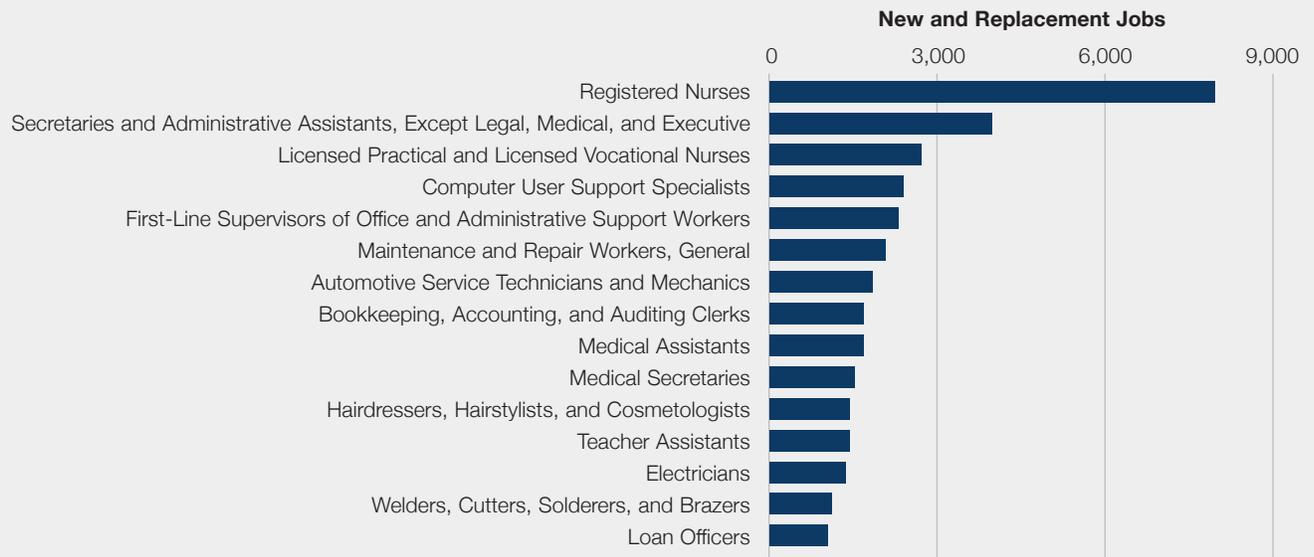

There are over 200 Job Zone Three occupations. Looking ahead, many Job Zone Three occupations show significant growth and demand. In Clarion's workforce region, projections indicate 9.0 percent growth in Job Zone Three jobs between 2014 and 2024. Job demand is further emphasized through both new job growth and replacement job openings as workers in the profession retire, relocate, or change jobs. The projected new and replacement demand for Job Zone Three occupations is 72,400 between 2014 and 2024.

3.5.1 Top High Demand Occupations Aligning to Associate's Degrees

High demand occupations are identified as having the largest projected new and replacement demand between 2014 and 2024. The top high demand occupations in the region are largely driven by industry demand for skilled workers and typically the largest occupations in the region. However, career changes and the demographic characteristics of those who are currently employed—specifically age—also influence replacement demand. Occupations that employ an older demographic, specifically those aged 55 and older, will face increasing pressure to replace workers as older workers approach retirement age.

High demand occupations aligned to associate's degrees include: registered nurses, licensed practical and licensed vocational nurses, and secretaries and computer user support specialists. Fig. 16 and Fig. 17 highlight Clarion's workforce region top high demand occupations aligning to associate's degrees, projected job growth, and 10-year new and replacement jobs.

3.5.2 Fastest Growing Occupations Aligning to Associate’s Degrees

The fastest growing occupations are identified by the highest relative change (percent change) projected to occur between 2014 and 2024. In Clarion’s workforce region, the fastest growing occupations are largely driven by industry growth and demand. Growing industries reflect the needs of the broader economy. Given the aging population in the U.S. and Pennsylvania, the health care sector is driving demand for workers. The fastest growing occupations aligning to associate’s degrees include: occupational therapy aides, physical therapy assistants, massage therapists, web developers, and occupational therapy assistants. Fig. 18 and Fig. 19 highlight the fastest growing occupations in the region that align to associate’s degrees, projected job growth, and 10-year new and replacement jobs.

Fig. 18: Fastest Growing Occupations Aligning to Associate’s Degrees in Clarion University’s Workforce Region, 2014-2024

3.6 Occupations Aligning to Bachelor's and Graduate Degrees

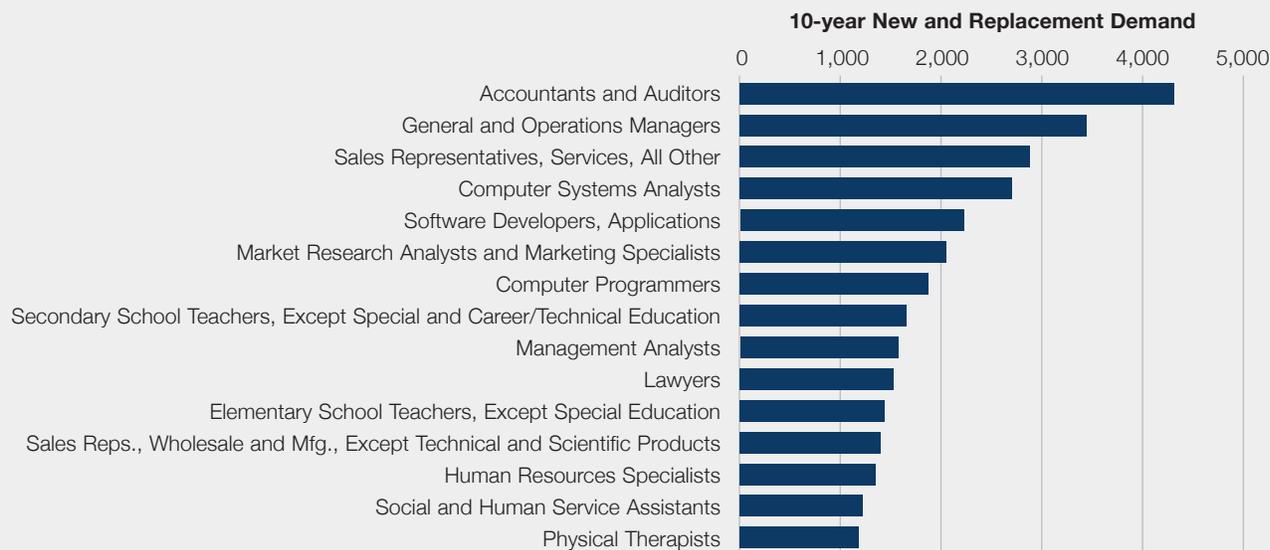

Job Zones Four and Five describe occupations that typically require a bachelor's degree or graduate degree. There are over 250 Job Zone Four and Five occupation classifications. In Clarion's workforce region, the employment projections indicate that occupations typically requiring a bachelor's degree or higher will grow 10.7 percent between 2014 and 2024. This growth will result in total demand for new and replacement job openings of nearly 79,700 over the same time period.

3.6.1 Top High Demand Occupations Aligning to Bachelor's and Graduate Degrees

High demand occupations are identified as having the largest projected new and replacement demand between 2014 and 2024. The top high demand occupations in the region are largely driven by industry demand for skilled workers and typically the largest occupations in the region. However, career changes and the demographic characteristics of those who are currently employed—specifically age—also influence replacement demand. Occupations that employ an older demographic, specifically those aged 55 and older, will face increasing pressure to replace workers as older workers approach retirement age.

High demand occupations aligning to bachelor's and graduate degree level education include: accountants and auditors, general and operations managers, sales representatives, services, and computer systems analysts. Fig. 20 and Fig. 21 highlight the top high demand occupations in the region aligning to bachelor's and graduate degrees, projected job growth, and 10-year new and replacement jobs.

3.6.2 Fastest Growing Occupations Aligning to Bachelor's and Graduate Degrees

The fastest growing occupations are identified by the highest relative change (percent change) projected to occur between 2014 and 2024. In Clarion's workforce region, the fastest growing occupations aligning to bachelor's and graduate degrees include: biochemists and biophysicists, information security analysts, petroleum engineers, and therapists, all other. Fig. 22 and Fig. 23 highlight Clarion's workforce region fastest growing occupations aligning to bachelor's and graduate degrees, projected job growth, and 10-year new and replacement jobs.

Fig. 22: Fastest Growing Occupations Aligning to Bachelor's and Graduate Degrees in Clarion University's Workforce Region, 2014-2024

4. POSTSECONDARY PROGRAM COMPLETIONS IN CLARION UNIVERSITY'S WORKFORCE REGION

Clarion University's workforce region is home to many different postsecondary institutions, offering a range of degree programs. As reported by the National Center for Education Statistics (NCES), there are approximately 40 higher education institutions in the region that awarded an associate's degree or higher between 2011 and 2013.⁸ These institutions graduated, on average, 27,800 students annually from 2011 to 2013 with an associate's degree or higher.⁹ The top major fields of study include education; health professions and related programs; and business, management, marketing, and related support services. Pennsylvania's State System of Higher Education is a large contributor to bachelor's and graduate degree completions. Clarion University produces approximately 6% of the total bachelor's degrees and above in the region.¹⁰

4.1 Associate's Degree Completions

Clarion's workforce region is home to approximately 26 different institutions that offer a range of associate's degree programs.¹¹ From 2011 to 2013, these institutions in Clarion's workforce region awarded, on average, 5,400 associate's degrees annually. The top three program areas in the region's associate degree production include:

- Health professions and related programs,
- Business, management, marketing, and related support services, and
- Engineering technologies and engineering-related fields.

8 This number includes the location of a physical campus/structure with learner enrolment as reported to NCES. Institutions with extension campuses that report enrollment at their main campus may not be captured within this list.

9 This number is the 3-year average completions from 2011 to 2013 as reported to NCES.

10 This number is based on the 3-year average completions from 2011 to 2013 as reported to NCES.

11 This number includes the location of a physical campus/structure as reported to NCES. Institutions with extension campuses that report to their main campus may not be captured within this list.

Of the 5,400 average annual completions of associate's degrees, these three program areas accounted for 52% of completions in the region.

4.1.1 Clarion University's Associate's Degree Completions

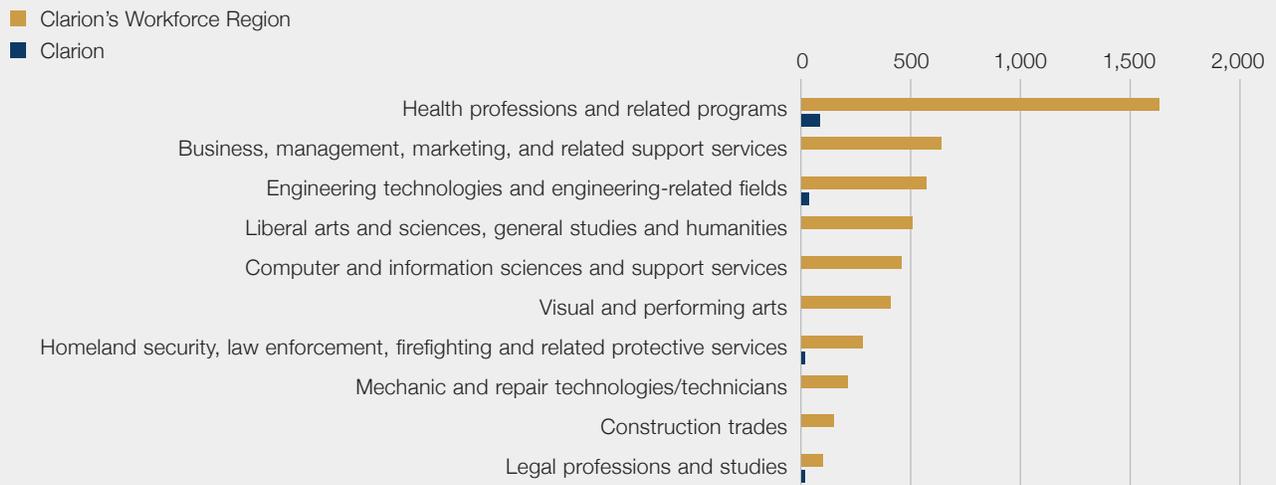

From 2011 to 2013, Clarion University awarded, on average, 160 associate's degrees annually. The top program areas for associate's degrees from Clarion University include:

- Health professions and related programs,
- Engineering technologies and engineering-related fields, and
- Education.

Of the 160 average annual completions of associate's degrees from Clarion University, these three program areas accounted for 75% of associate's degree completions.

Fig. 24 highlights the top 10 program areas for associate's completions in Clarion's workforce region along with the corresponding associate's completions from Clarion University.

Fig. 24: Associate's Degree Program Completions from Clarion University and Clarion's Workforce Region, 2011-2013 Annual Average

4.2 Bachelor's Degree Completions

Clarion University's workforce region is home to approximately 14 different institutions that offer a range of bachelor's degree programs.¹² From 2011 to 2013, these institutions in Clarion's workforce region awarded, on average, 12,500 bachelor's degrees annually. The top three program areas in the region's bachelor degree production include:

- Business, management, marketing, and related support services,
- Health professions and related programs, and
- Visual and performing arts.

Of the 12,500 average annual completions of bachelor's degrees, these three program areas accounted for 38% of completions in the region.

4.2.1 Clarion University's Bachelor's Degree Completions

From 2011 to 2013, Clarion University awarded, on average, 950 bachelor's degrees annually. The top program areas for bachelor degrees from Clarion University include:

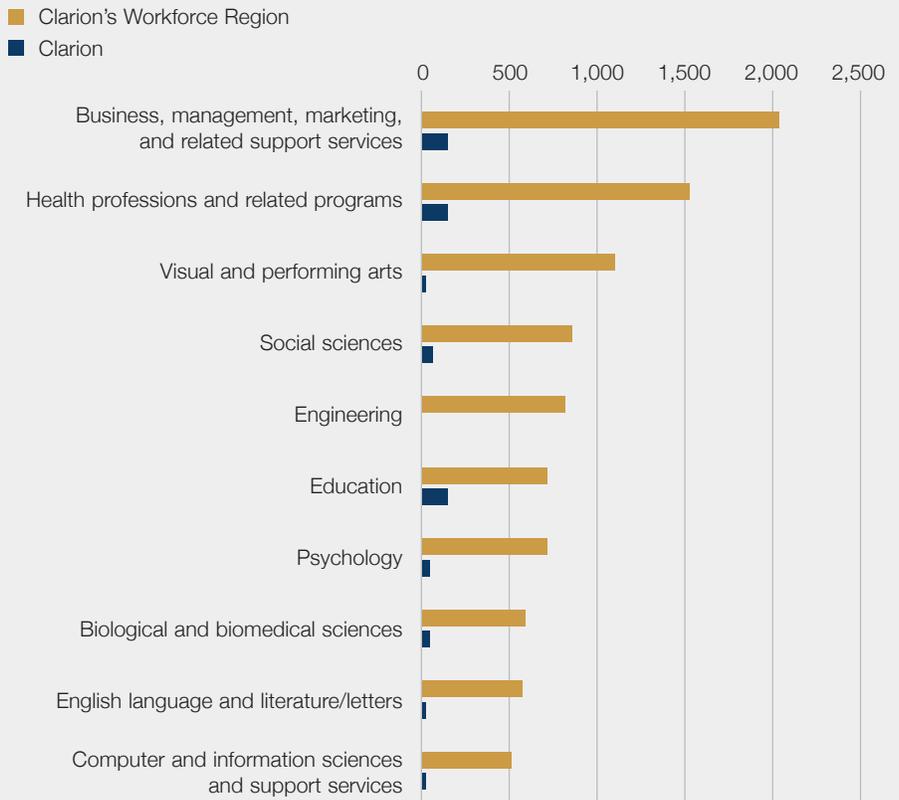

- Business, management, marketing, and related support services,
- Health professions and related programs, and
- Education.

Of the 950 average annual completions of bachelor's degrees from Clarion University, these three program areas accounted for 46% of bachelor's degree completions.

Fig. 26 highlights the top program areas for bachelor's completions in Clarion's workforce region, along with the corresponding bachelor's completions from Clarion University.

¹² This number includes the location of a physical campus/structure as reported to NCES. Institutions with extension campuses that report to their main campus may not be captured within this list.

4.3 Graduate Degree Completions

Clarion University's workforce region is home to approximately 14 different institutions that offer a range of graduate degree programs.¹³ From 2011 to 2013, these institutions in Clarion's workforce region awarded, on average, 9,900 graduate degrees annually. The top three program areas in the region's graduate degree production include:

- Health professions and related programs,
- Business, management, marketing, and related support services, and
- Education.

Of the 9,900 average annual completions of graduate degrees in Clarion's workforce region, these three program areas accounted for 45% of graduate completions.

4.3.1 Clarion University Graduate Degree Completions

From 2011 to 2013, Clarion University awarded, on average, 470 graduate degrees annually. The top program areas for graduate degrees from Clarion University include:

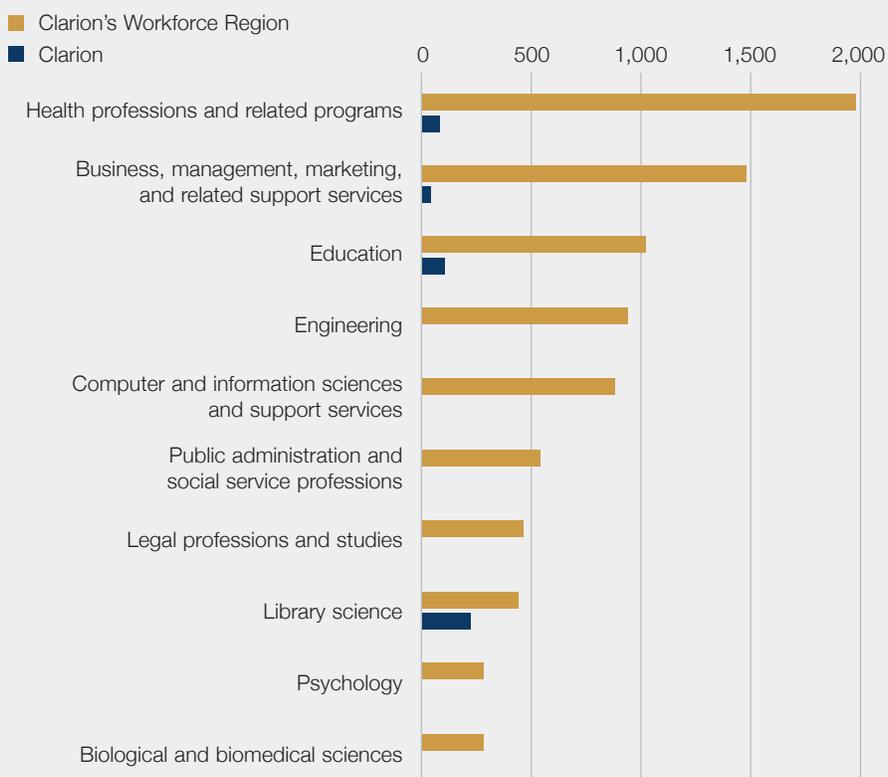

- Library science,
- Education, and
- Health professions and related programs.

Of the 470 average annual completions of graduate degrees from Clarion University, these three program areas accounted for 88% of graduate degree completions.

Fig. 28 highlights the top program areas for graduate completions in Clarion's workforce region, along with the corresponding graduate completions from Clarion University.

¹³ This number includes the location of a physical campus/structure as reported to NCES. Institutions with extension campuses that report to their main campus may not be captured within this list.

Fig. 28: Graduate Degree Program Completions from Clarion University and Clarion’s Workforce Region, 2011-2013 Annual Average

Source: National Center for Education Statistics (IPEDS) 2011-2013 Completions

Fig. 29 on the next page provides the total number of graduate degrees awarded in Clarion’s workforce region by major category as well as the total number of graduate degrees awarded by Clarion University.

The next section evaluates the combination of completions by degree type (education supply) against the demand for skilled labor by occupation to determine whether potential gaps (excess demand or supply surplus) exist within the region’s postsecondary education system.

5. OVERVIEW OF GAP ANALYSIS

A gap analysis comparing educational supply and occupational demand serves as a critical first step in efforts to align education programs with the workforce needs of Pennsylvania employers. It provides a data-driven perspective of employer demand (growing occupations across the state) and postsecondary education supply (degree production by program and level). This section focuses on the demand gaps and supply surpluses for skilled occupations in Clarion's workforce region.¹⁴

To make the connection between employer demand and education supply a crosswalk between the taxonomy of occupation codes (Standard Occupation Codes, or SOC) and major programs (Classification of Instructional Program or CIP) is required. The State System's Gap Analysis project conducted original research to enhance the traditional taxonomy of major program to occupation crosswalk using American Community Survey data that demonstrate a broader spectrum of connections between education programs and occupations.¹⁵ This hybrid crosswalk connected the CIP and SOC using both the NCES and Pennsylvania standard crosswalks and the additional real-world connections using the American Community Survey.

¹⁴ Skilled occupations are occupations in Job Zones 3, 4, and 5.

¹⁵ The existing crosswalks available include a national NCES crosswalk and a state crosswalk specific to Pennsylvania. Additional connections were made using data available in the ACS.

EDUCATION TO OCCUPATION CROSSWALKS AND WHAT SETS THIS GAP ANALYSIS APART FROM PREVIOUS STUDIES

Typical gap analysis will use one of two approaches when building a crosswalk: The Department of Education (DOE) crosswalk or the American Community Survey (ACS) crosswalk.

The DOE crosswalk, completed through collaboration with the Bureau of Labor Statistics and the National Center for Education Statistics (NCES), attempts to link occupation classifications (SOC code) to their related educational programs (CIP code). The drawback is that there is often not a one-to-one connection between education programs and occupations and in even some extreme cases, education programs related to occupations do not match the reality of careers people enter. Another drawback is that occupations often employ a range of degree and non-degree completers, which reflects the reality of the labor market. For example a customer representative for a technology company may have a bachelor's degree in computer programming, whereas a customer service representative for a retail company may only have a high school diploma.

The ACS crosswalk is built on a large survey sample consisting of 160 education program codes and 261 occupation classifications (note: these are not as detailed as CIP and SOC codes), reflecting the careers individuals take after they complete their education programs. Whereas DOE's crosswalk seeks to state what should be, the ACS crosswalk states what is. This approach is very practical when dealing with education programs that don't match closely to a specific occupation (e.g. liberal arts degrees, history degrees, etc.). Additionally, ACS data provide a measure that estimates the demand for workers with various levels of postsecondary education in a given occupation. For example if 21% of customer service representatives have a bachelor's degree, then only 21% of the annual demand for customer service representatives will be counted against the supply of matching education programs.

The methodology developed for this gap analysis bridges the two approaches above. Occupations that

are linked through DOE are not discounted, even if ACS suggests that there are relatively few degree completions entering the occupation field. Additionally, the use of ACS more closely captures the reality of where degree holders have found employment in Pennsylvania and surrounding states—note the geography for measuring gaps was restricted to Pennsylvania only, however occupation to education linkages were built on a multi-state region. While there are certainly exceptions to the rule, which were ultimately reviewed on a case-by-case basis as described in detail in Appendix E, the approach does capture the vast majority of relevant and compelling connections between education programs and occupations. Lastly, the methodology takes into account the labor market behavior of both employers and employees in the following ways:

- It provides a measure of education distribution by degree level demonstrating that a range of skill levels can exist within occupation classification.
- It captures the demand and range for bachelor's degree field of study within an occupation classification.*
- It provides a reality-driven process to connect bachelor's degree field of study to occupations, especially in the liberal arts programs.
- It provides a regionalized crosswalk that better reflects the competition for jobs in Pennsylvania and the surrounding region.

By modeling these features, this gap analysis accounts for issues that were not accounted for in previous gap analysis studies.

* The ACS reports two separate pieces of information: highest level of educational attainment for an individual and major field of study for an individual's bachelor degree. The major field of study is not reported for associate's degrees or graduate degrees.

5.1 How to use the Gap Analysis

The gap analysis results are presented as two main sets of findings: demand gaps (excess employer demand) and supply surpluses. Each outcome has a different set of implications for area stakeholders, postsecondary education institutions, and learners. These outcomes are summarized briefly below and then described further in each relevant section.

The uses of a gap analysis are many and varied and include:

- **Strategic engagement:** Increased collaboration and alignment between regional employers and education programs helps ensure a competitive, vibrant regional economy. The gap analysis enables this process by helping postsecondary institutions identify areas of employer need. The analysis provides a data-driven starting point to begin conversations with employers on how postsecondary institutions can help meet education/training needs in the regional economy.
- **Enhanced program development/evaluation:** The gap analysis serves as an additional tool for decision-making in academic program planning by addressing one aspect of the external eco-system—alignment of academic programs to the regional labor market.
- **Student engagement/career guidance:** The analysis provides information that can be used for career guidance and job search. The gap analysis results can inform learners about the alignment of education programs to careers, as well as the market demand for jobs.
- **Marketing:** By highlighting information about high demand occupations that are linked to education programs, postsecondary education institutions can demonstrate how learners will succeed after program completion. Where compelling information exists, this can be used in student recruitment efforts.

While the State System's Gap Analysis project is critical to understanding the connections between education programs and occupations, it is important to recall the caveats of this Gap Analysis report:

- When considering making adjustments to programs in degree areas related to occupations displaying gaps, further research should be considered to confirm the extent of alignment needed to arrive at equilibrium with the labor market.
- Government data that capture labor market demand lag real-time employer demand as well as higher education industry trends. As such, the gap analysis findings may lag these market changes.

- This analysis only focuses on program output as a supply pool (i.e. new graduates). However, regional workforces comprise additional pools of supply—specifically: employed workers, skilled unemployed workers, and skilled underemployed workers. When evaluating gaps, this analysis focuses on new and replacement demand, as opposed to job churn.¹⁶ This helps to mitigate some of the issues involving the employed workforce.

Excess Employer Demand (Demand Gap)

A demand gap exists where the regional supply of talent is insufficient to support the workforce needs of businesses located there. Where such gaps exist businesses will likely seek talent from outside the area, which can become costly from an HR perspective. This especially affects small and medium sized businesses that usually do not have well-developed HR functions. Additionally,

ABSOLUTE DEMAND GAP VS. RELATIVE DEMAND GAP

Results for demand gaps in this analysis are calculated in two different ways. An absolute demand gap is a nominal comparison, wherein the supply of program completions which align to an occupation is subtracted from the demand for those aligned occupations. This produces a “headcount” of the additional number of program completions needed to meet the demand within an occupation.

A relative demand gap is a ratio of program supply to occupation demand, which is expressed as a percentage. A percentage below 100% indicates excess employer demand relatively (e.g. the number of program completers is less than the occupation demand), whereas a value over 100% indicates that there are more program completions relative to occupation demand.

This analysis factors in both the absolute measure and relative measure to enable a broader perspective for interpretation. For example, an occupation that may indicate an average annual demand for 40 jobs per year with 30 annual completers would require 25% more completions to bridge the gap ($30 / 40 = 0.75$). However, this absolute gap would suggest that the increased amount of program output—10 additional completers—is relatively small. Therefore for program planning purposes, both perspectives are helpful to set the context of the demand gap.

¹⁶ Replacement jobs include retirements, deaths, and other workers who permanently leave an occupation. Job churn occurs when a worker leaves one job for another, but continues working in the same occupation.

employers—especially those in more rural areas—may face higher costs as they attempt to draw in workers from more populated areas.

This creates an opportunity to expand output or develop programs. For education institutions, gaps present an opportunity for program expansion (where current programs align, but are not creating enough output). The strategy for increasing output may differ—whether capacity or learner recruitment is a constraining factors. If a program does not exist, a gap may present an opportunity for new program development.

Learners may gain a competitive employment edge when excess employer demand exists. For learners, when demand exceeds supply, graduates in relevant disciplines usually benefit—providing opportunities for career progression and higher earnings in both the short and long term.

Supply Surplus (Supply Gap)

A supply surplus for an occupation exists when the number of program completions within a region exceeds the employer demand. This presents some key implications to consider.

ABSOLUTE SUPPLY SURPLUS VS. RELATIVE SUPPLY SURPLUS

Results for supply surpluses are calculated in two different ways. An absolute supply surplus is a nominal comparison, wherein the supply of program completions which align to an occupation is subtracted from the demand for those aligned occupations. This produces a “headcount” of the number of program completions that exceed the projected demand for a given occupation.

A relative supply surplus is a ratio of program supply to occupation demand, which is expressed as a percentage. A percent above 100% indicates a relative supply surplus (e.g. the number of program completers is more than the occupation demand).

This analysis factors both ways to enable a broader perspective for interpretation. For example, an occupation that may indicate an average annual demand for 40 jobs per year with 50 annual completers would suggest that there are about 25% more completions than the workforce demands for occupations that tie to that program ($50 / 40 = 1.25$). However, this absolute gap would suggest that the increased amount of program output—10 additional completers—is relatively small. Furthermore, this may indeed fall within “tolerable levels” of program supply surplus. Therefore for programming planning and evaluation purposes, both perspectives are helpful to set the context of the supply surplus.

If employer demand is less than education production in relevant occupations, learners are likely to leave the region after graduation causing learner attrition and out-migration. Surpluses in talent supply can also suppress wages for graduates in certain careers. Classic labor market economic theory suggests that increased competition for jobs will put downward pressure on wages—i.e. the more people competing for the same job gives an employer a better bargaining position for wage/salary. While a college degree in and of itself has a measured wage premium, specific programs areas may have a range of wage premiums based on the supply of new talent competing for jobs and the conditions of the labor market.

5.2 Excess Demand Gaps for Skilled Occupations

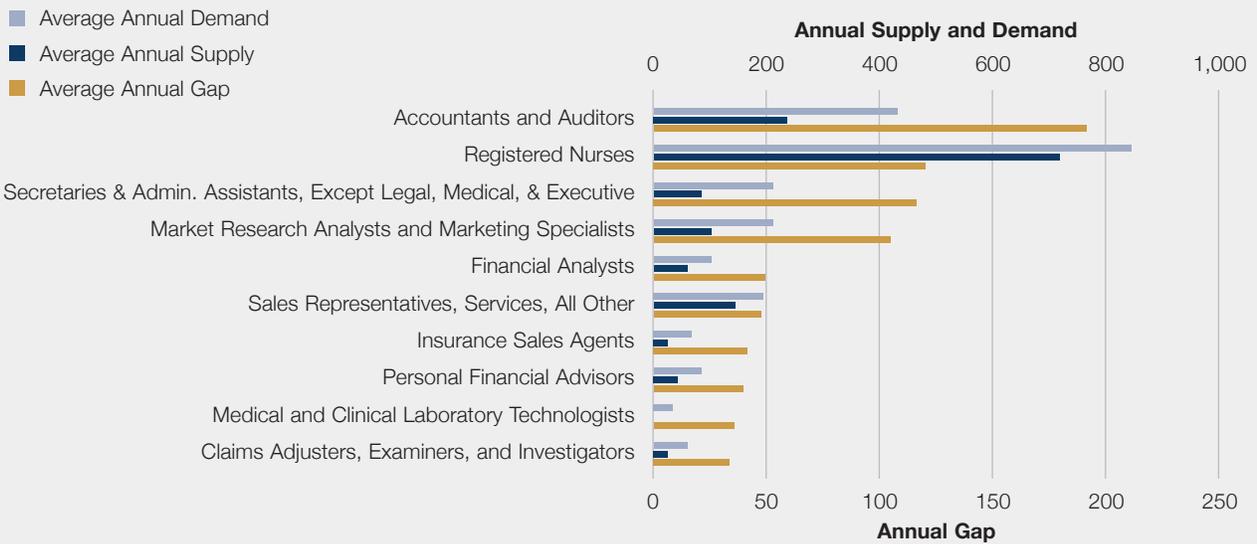

Excess demand gaps exist for many skilled occupations (occupations in Job Zones Three, Four and Five) within Clarion’s workforce region. The degree programs that align to these occupations span associate’s degrees through graduate degrees. Recall that a demand gap exists where the regional supply of talent is insufficient to support the workforce needs of businesses located there. The top excess demand gaps are identified by the size of the annual gap.

In Clarion’s workforce region, growth in the finance and insurance sector has increased demand for business and sales occupations. Twelve out of the top twenty demand gaps are occupations related to sales and business occupations, combining for an average annual demand gap of 647. The largest demand gap exists for accountants and auditors with an average annual gap of 220.

Additionally, growth in the health care and social assistance industry has increased demand for healthcare practitioners and technical occupations. These occupations represent three out of the top twenty demand gaps and combine for an average annual demand gap of 193.

Fig. 30 and Fig. 31 provide further detail about the top occupation gaps that reveal excess employer demand. The table includes the occupation title, occupation job zone, projected annual employer demand (for associate’s degrees and higher), the annual supply of program completions (allocated to the occupation), the average annual gap, and a ratio of supply to demand (S/D Ratio).

5.3 Excess Demand Gaps for Occupations Without a Clarion University Match

The breadth of programs offered at Clarion University indicates a number of strong linkages to occupations. However, many occupations within Clarion's workforce region show excess demand for which Clarion University did not produce completers in a matching program area. Furthermore, analysis indicates continued demand for these occupations over the next decade. Recall that a demand gap exists where the regional supply of talent is insufficient to support the workforce needs of businesses located there.

Fig. 32 displays the top excess demand gaps for occupations that did not have matching program completers at Clarion University. Physicians and surgeons, all other show the largest excess annual demand gap at 34. This is followed by: industrial machinery mechanics, family and general practitioners, construction and building inspectors, and urban and regional planners.

Fig. 33 provides detailed information for each occupation the occupation title, occupation job zone, projected annual employer demand (for associate's degrees and higher), the annual supply of program completions (allocated to the occupation), the average annual gap, and a ratio of supply to demand (S/D Ratio).

Fig. 32: Top Demand Gaps for Skilled Occupations in Clarion University's Workforce Region Without a State System Program

Source: BLS (QCEW and OES); Pennsylvania Department of Labor & Industry; Oxford Economics Projections; NCES (IPEDS 2011-2013 Completions)

Source: BLS (QCEW and OES); Pennsylvania Department of Labor & Industry; Oxford Economics Projections; NCES (IPEDS 2011-2013 Completions)

5.4 Supply Surplus Gaps

Supply surplus gaps for skilled occupations cover occupations in Job Zones Three, Four and Five. The degree programs that align to these occupations span associate's degrees through graduate degrees. Recall that a supply surplus for an occupation exists where the number of program completions within a region exceeds the employer demand. The top supply surplus gaps are identified by the size of the annual gap.

The top supply surpluses within Clarion's workforce region cover a broad range of both technical and non-technical occupations. When considering program changes in degree areas related to occupations displaying a supply surplus, further research should be considered to confirm the extent of alignment needed to arrive at equilibrium with the labor market.

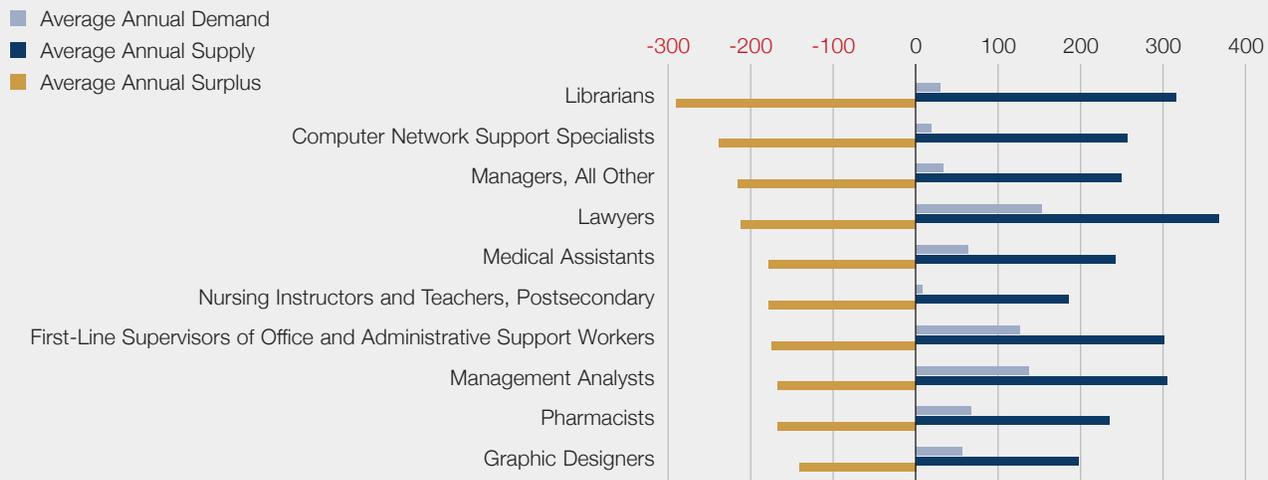

In Clarion's workforce region, the data reveal the number of graduates that are aligned to education, training, and library occupations greatly exceed the annual demand for workers by a combined annual average of 1,117 completions. Other occupations that indicate a supply surplus in Clarion's workforce region include computer network support specialists with an average annual surplus gap of 236 and lawyers with an average annual surplus gap of 212.

The largest supply surplus gap in the region exists for librarians with an average annual surplus gap of 287. Program completers in the top supply surplus occupations may face increased competition for occupations related to their field of study within the region.

Fig. 34 illustrates the top supply surpluses for skilled occupations in Clarion's workforce region. Fig. 35 provides the occupation title, occupation job zone, projected annual employer demand (for associate's degrees and higher), the annual supply of program completions (allocated to the occupation), the average annual gap, and a ratio of supply to demand (S/D Ratio).

This section provided an overview of gaps from the perspective of excess demand and supply surpluses. It is intended to set the data-driven foundation for understanding current alignment of education production in Clarion's workforce region compared to the region's employer demand for graduates in specific program areas. Results for the gaps are largely driven by industry employment growth. As market conditions change, the resulting demand for skilled workers will also change. Therefore, results of this analysis should be taken in the context of changing industry sector employment and occupational demand.

6. CONCLUSION

The State System Gap Analysis report provides a data-driven foundation for program planning and alignment in order to drive economic value and career success within the state and its regions. The analysis itself is not the solution, but can lend credible insight to guide decision-making at the strategic level. The content is designed to be a starting point and resource for program evaluation and planning.

It is important to remember that the results for the gaps are largely driven by industry employment growth. As labor market conditions change, the resulting demand for skilled workers will also change. Therefore, the results of this analysis should be taken in a context of changing industry sector employment and occupational demand.

Additionally, areas of future research should be considered when considering program evaluation and planning. These areas include (but are not limited to):

- Strong vs. weak occupation to education alignment,
- Wage trend research and supply/demand effects on wages,
- Career pathways, outcomes, and lifetime earnings,
- Issues of mal-employment¹⁷ and underemployment,¹⁸ and
- Program alignment best practices.

As more insights into the connections between education programs and labor market outcomes are gained, students, universities, workers, and employers will all benefit significantly.

17 Mal-employment is a specific type of underemployment that exists in the labor market. This occurs when college-educated workers choose to work in occupations that do not utilize the skills and abilities gained in college. An example of this would include a person who has a bachelor's degree in political science but works as bartender. For more on mal-employment see Harrington and Fogg (2011) "Rising Mal-Employment and the Great Recession: The Growing Disconnection between Recent College Graduates and the College Labor Market."

18 Underemployment occurs in the labor market when workers' skills, experience, and willingness to work are not fully utilized. An example of this would include a person who is employed part-time but wants to work full-time.

7. ABOUT THE STATE SYSTEM'S GAP ANALYSIS PROJECT

The gap analysis methodology and report was produced through a multi-organization collaboration that consisted of Pennsylvania's State System of Higher Education Office of the Chancellor and Oxford Economics USA Inc. —the team. Throughout the project and research process, the team sought feedback and insight from senior administration and representatives from each of the 14 State System Universities. The team also drew on insight and feedback from Georgetown University's Center on Education and the Workforce as well as subject matter experts involved in labor market intelligence and education program alignment.

The modeling and results presented here are based on information provided by third parties, upon which Oxford Economics has relied in producing its report and forecasts in good faith. Any subsequent revision or update of those data will affect the assessments and projections shown.

Oxford Economics is a key adviser to corporate, financial, government and education decision-makers and thought leaders. Oxford Economics' worldwide client base now comprises over 1000 international organizations, including leading multinational companies and financial institutions; key government bodies and trade associations; and top universities, consultancies, and think tanks.

This report is confidential to stakeholders of Pennsylvania's State System of Higher Education and may not be published or distributed without their prior written permission. Contact information for such request is provided below:

Economic Modeling Specialists International (EMSI)

APPENDIX A: STATE SYSTEM SUB-REGIONS WITH PREP REGIONS AND WIA REGIONS

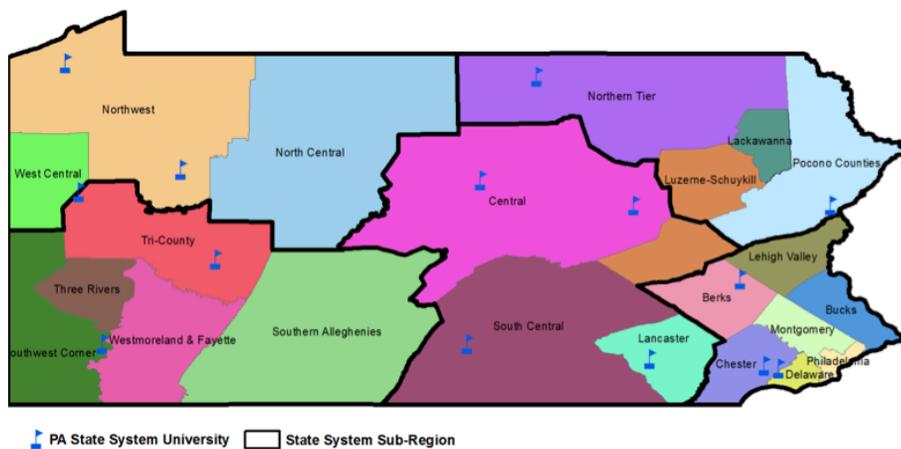

Partnerships for Regional Economic Performance (PREP) regions provide geographic context of how the Pennsylvania Department of Community & Economic Development divides resources and services to support business development, start-ups, investment and other economic development initiatives. To define sub-regions for this project, PREP regions served as the starting point. The following figures outline the sub-regions in relation to PREP regions.

An additional map of Pennsylvania's Workforce Investment Act (WIA) regional boundaries is also provided.

State System Sub-regions and PREP Boundaries

State System Sub-regions and WIA Boundaries

APPENDIX B:

O*NET JOB ZONE CODES

The O*NET program is the nation's primary source of occupational information. Central to the project is the O*NET database, containing information on hundreds of standardized and occupation-specific descriptors. The database, which is available to the public at no cost, is continually updated by surveying a broad range of workers from each occupation.¹⁹

JOB ZONE ONE: Little or No Preparation Needed

- *Education* – Some of these occupations may require a high school diploma or GED certificate.
- *Related Experience* – Little or no previous work-related skill, knowledge, or experience is needed for these occupations. For example, a person can become a waiter or waitress even if he/she has never worked before.
- *Job Training* – Employees in these occupations need anywhere from a few days to a few months of training. Usually, an experienced worker could show you how to do the job.
- *Job Zone Examples* – These occupations involve following instructions and helping others. Examples include taxi drivers, amusement and recreation attendants, counter and rental clerks, nonfarm animal caretakers, continuous mining machine operators, and waiters/waitresses.

JOB ZONE TWO: Some Preparation Needed

- *Education* – These occupations usually require a high school diploma.
- *Related Experience* – Some previous work-related skill, knowledge, or experience is usually needed. For example, a teller would benefit from experience working directly with the public.
- *Job Training* – Employees in these occupations need anywhere from a few months to one year of working with experienced employees. A recognized apprenticeship program may be associated with these occupations.

¹⁹ <http://www.onetcenter.org/overview.html>

- *Job Zone Examples* – These occupations often involve using your knowledge and skills to help others. Examples include sheet metal workers, forest fire fighters, customer service representatives, physical therapist aides, salespersons (retail), and tellers.

JOB ZONE THREE: Medium Preparation Needed

- *Education* – Most occupations in this zone require training in vocational schools, related on-the-job experience, or an associate's degree.
- *Related Experience* – Previous work-related skill, knowledge, or experience is required for these occupations. For example, an electrician must have completed three or four years of apprenticeship or several years of vocational training, and often must have passed a licensing exam, in order to perform the job.
- *Job Training* – Employees in these occupations usually need one or two years of training involving both on-the-job experience and informal training with experienced workers. A recognized apprenticeship program may be associated with these occupations.
- *Job Zone Examples* – These occupations usually involve using communication and organizational skills to coordinate, supervise, manage, or train others to accomplish goals. Examples include food service managers, electricians, agricultural technicians, legal secretaries, occupational therapy assistants, and medical assistants.

JOB ZONE FOUR: Considerable Preparation Needed

- *Education* – Most of these occupations require a four-year bachelor's degree, but some do not.
- *Related Experience* – A considerable amount of work-related skill, knowledge, or experience is needed for these occupations. For example, an accountant must complete four years of college and work for several years in accounting to be considered qualified.
- *Job Training* – Employees in these occupations usually need several years of work-related experience, on-the-job training, and/or vocational training.
- *Job Zone Examples* – Many of these occupations involve coordinating, supervising, managing, or training others. Examples include accountants, sales managers, database administrators, teachers, chemists, art directors, and cost estimators.

JOB ZONE FIVE: Extensive Preparation Needed

- *Education* – Most of these occupations require graduate school. For example, they may require a master’s degree, and some require a Ph.D., M.D., or J.D. (law degree).
- *Related Experience* – Extensive skill, knowledge, and experience are needed for these occupations. Many require more than five years of experience. For example, surgeons must complete four years of college and an additional five to seven years of specialized medical training to be able to do their job.
- *Job Training* – Employees may need some on-the-job training, but most of these occupations assume that the person will already have the required skills, knowledge, work-related experience, and/or training.
- *Job Zone Examples* – These occupations often involve coordinating, training, supervising, or managing the activities of others to accomplish goals. Very advanced communication and organizational skills are required. Examples include librarians, lawyers, sports medicine physicians, wildlife biologists, school psychologists, surgeons, treasurers, and controllers.

APPENDIX C: STRONG, LIMITED AND WEAK EDUCATION PROGRAM TO OCCUPATION CONNECTIONS²⁰

	Direct Connection	Limited Connection	Weak Connection
Surplus	Definitive surplus of graduates to projected demand; indicates strong market relationship between CIP and SOC(s) suggesting limited need for additional investments in program.	Apparent surplus of graduates in most related occupations. Likely intense competition for limited job opportunities. Moderate occupation ties require identification of special market links prior to added program investments.	Data indicates surplus of graduates likely, however the weak connection of the education program to specific occupations does not conform to traditional supply/demand data analysis.
Balanced	Balanced supply of graduates relative to demand. Job competition for newly minted graduates will be competitive, but opportunities in related occupations exist.	Apparent balanced supply of graduates relative to job demand in most related occupations. Data may be indeterminate relative to labor surplus or shortage situation. Added program review required to determine if greater labor market opportunities are present due to emerging or evolving occupations.	Data indicates balanced supply of graduates likely, but the weak connection to specific occupations does not conform to traditional supply/demand data analysis. Review occupational connections in CIP to SOC crosswalk to determine possible job market opportunities.
Gap	Definitive gap of completers relative to occupation demand. Data indicates likely shortages. Program is a strong candidate for additional resources and targeted recruitment efforts increase supply.	Apparent gap of graduates relative to job demand in at least one closely related occupation. Job opportunities may exist in at least one other related occupation. More research worthwhile to determine possible added occupation connections.	Data indicates gap of graduates likely, but weak connection to specific occupations does not conform to traditional supply/demand data analysis. Related jobs may exist but are not directly connected to the program. Review crosswalk for possible occupation links.

²⁰ The relationship matrix is drawn from: Labor Supply/Demand Analysis: Approaches and Concerns (2010) by Richard Froeschle formerly of the Texas Workforce Commission's Labor Market and Career Information (LMCI). While this context is important to know, Oxford Economics' methodology sought to minimize these issues by developing a crosswalk that uses real world education program to occupation matches through U.S. Census ACS data to more closely reflect the careers program completers actually enter into after graduation.

APPENDIX D: 4-DIGIT INDUSTRY EMPLOYMENT PROJECTIONS

The table below displays the employment numbers for industries at the four-digit NAICS level in Clarion's workforce region in 2010, 2014, and 2024. It also provides the detailed NAICS code, industry title, 2014 industry LQ, and projected job growth to 2024.

NAICS Code	Industry Title	2014 LQ	2014 Jobs	2024 Jobs	% Change 2014-2024
Total	All Industries	1.0	874,882	940,053	7.4%
1111	Oilseed and Grain Farming	0.1	36	43	19.4%
1112	Vegetable and Melon Farming	0.2	109	112	2.8%
1113	Fruit and Tree Nut Farming	0.0	12	11	-8.3%
1114	Greenhouse, Nursery, and Floriculture Production	0.3	246	263	6.9%
1119	Other Crop Farming	0.1	37	43	16.2%
1121	Cattle Ranching and Farming	0.1	59	61	3.4%
1122	Hog and Pig Farming	0.0	2	2	0.0%
1125	Aquaculture	0.2	7	6	-14.3%
1129	Other Animal Production	0.1	12	14	16.7%
1131	Timber Tract Operations	0.4	19	23	21.1%
1132	Forest Nurseries and Gathering of Forest Products	0.3	4	4	0.0%
1133	Logging	0.3	92	104	13.0%
1142	Hunting and Trapping	0.2	2	2	0.0%
1151	Support Activities for Crop Production	0.0	63	55	-12.7%
1152	Support Activities for Animal Production	0.2	33	25	-24.2%
1153	Support Activities for Forestry	0.1	9	10	11.1%
2111	Oil and Gas Extraction	1.9	2,436	3,261	33.9%
2121	Coal Mining	2.6	1,179	1,067	-9.5%
2122	Metal Ore Mining	0.1	21	24	14.3%
2123	Nonmetallic Mineral Mining and Quarrying	0.7	385	343	-10.9%
2131	Support Activities for Mining	0.8	2,275	2,264	-0.5%
2211	Electric Power Generation, Transmission and Distribution	0.5	1,410	1,332	-5.5%
2212	Natural Gas Distribution	1.9	1,413	1,435	1.6%

APPENDIX E: METHODOLOGY

The data-driven process involved in developing this gap analysis required multiple steps including compiling education output and forecasting occupation demand. Broadly speaking, supply-side educational completion data were assembled at the program level for State System Universities as well as other institutions within Pennsylvania. A three-year average was used to mitigate year-to-year variability in completions. A mapping analysis, known as a crosswalk, was developed looking at education programs and occupations and using a combination of the National Center for Education Statistics' (NCES) and US Census American Community Survey (ACS) data. The crosswalk was applied to occupation demand projections, which were produced by Oxford Economics and updated to 2014-2024, to calculate both new and replacement jobs. Linking annual program completions (supply) and annual occupation

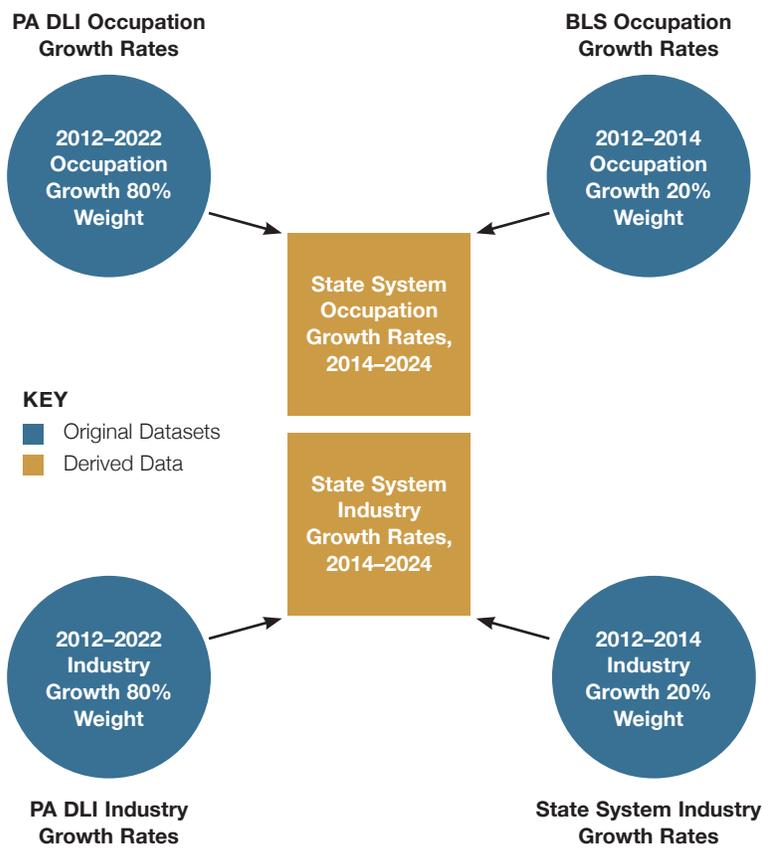

Fig. 36: Summary of Gap Analysis Methodology

projections (demand) enabled the calculation of the difference between the two, providing an insight into potential workforce gaps and surpluses for educational institutions to consider. Fig. 36 provides a high-level flow chart of the process to calculate gaps/surpluses.

A primary goal of the research was to produce updated forecasts for industries and occupations at the county level for Pennsylvania. Fig. 37 provides a summary of the growth rate calculations used in the forecasts.

Fig. 37: Summary of Growth Rate Calculations

APPENDIX F: GAP ANALYSIS RESULTS

The following table provides the results of the gap analysis for all detailed occupations in Clarion's workforce region. The following information is provided in the table below:

- A description of the occupation – SOC Code and occupation title.
- A description of the level of the occupation – Job Zone.
- Gap indicator with the following color codes:
 - Green = Projected excess employer demand
 - Purple = Projected excess demand at specific degree level
 - Yellow = Projected balance
 - Blue = Projected supply surplus
- Average annual supply, demand, and gap number for each occupation and the detailed degree level supply, demand, and gap number for each occupation.
- The ratio of average annual supply to average annual demand (S/D Ratio).
