ANALYST

An essential tool that brings together statistics and trends, demographics, and higher education data to provide integral labor market information to State System universities.

Sample Screenshots

- Contains comprehensive information on industries, occupations, and demographics, as well as data on occupational skills, education, and training
- Pulls data together from more than 80 federal, state, and private sources and presents it for State System and university use
- Enables the State System and its 14 universities to quickly perform regional comparative analysis, identify driver industries, and effectively align State System universities’ programs with in-demand occupations
- Helps universities justify grant applications by providing contextualized data from their regional economies
